SUMMARY

Full Stack Developer building features for a production multi-portal CRM platform using Next.js, React, TypeScript, Node.js, and PostgreSQL. Experienced in REST API integration, authentication and authorization workflows, API debugging, and application improvements. Works with PostgreSQL in production and MySQL in personal projects. Built Node.js/Express projects involving real-time messaging, payment integrations, and AWS deployment.

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js, React Hooks, Next.js
Backend: Node.js, Express.js, REST APIs, JWT, RBAC, Middleware, bcrypt, Socket.io
Databases and ORM: MySQL, SQL, PostgreSQL, MongoDB, Knex.js, Sequelize, Supabase
Cloud and Tools: AWS (EC2, S3, RDS), Docker (working knowledge), Git, GitHub, Postman, Axios, Chrome DevTools, Cashfree, Razorpay
Foundations: Data Structures and Algorithms, CRUD Design, Error Handling, Agile Methodologies

EXPERIENCE

Soft7 Technologies Feb 2026 – Present
Full Stack Developer (converted from internship, May 2026) *Remote*

- Designed and implemented major parts of the Super Admin portal for a production CRM with three portals using Next.js, React, TypeScript, Node.js, Knex, and PostgreSQL. Features include company management, company details, transactions, support tickets, and activity logs.
- Identified inaccurate dashboard KPIs caused by paginated API responses and recommended backend-driven aggregate statistics and server-side search and filtering through API query parameters. Collaborated with backend developers on the proposed improvements.
- Worked on role-based access control and suspended-user handling across all three portals, integrating frontend workflows with backend JWT authentication middleware and request-level status validation.
- Fixed redundant API calls on the Super Admin dashboard, reducing calls from 8 to 5 (approximately 38% fewer). Also collaborated with backend developers to refine API payloads and response structures.
- Integrated 6+ REST API workflows covering companies, campaigns, transactions, tickets, and activity logs. Implemented input validation and debugged API issues using Postman and Chrome DevTools while testing workflows across all three portals.
- Proposed improvements approved by the team, including Socket.io-based real-time updates in place of polling, a protected Change Ownership flow instead of Delete Company, and prioritization of open support tickets.
- Built reusable React modules, including tables, filters, modals, and export actions. Refactored large Next.js files into components, hooks, and types, and currently guide three team members on frontend tasks.

PROJECTS

Expense Tracker | *React, JavaScript, Node.js, Express, MySQL, Sequelize* GitHub

- Built a full-stack expense management app with JWT authentication, search and filtering, pagination, analytics, and CSV export.
- Integrated Cashfree for premium subscriptions and deployed on AWS EC2 with static assets served from S3.

Chat Application | *Node.js, Express, MySQL, Sequelize, Socket.io* GitHub

- Developed real-time group messaging with Socket.io, including group management, admin controls, and file sharing.
- Automated message archiving using scheduled Cron jobs.

EDUCATION AND CERTIFICATIONS

Bachelor of Science, Mahatma Gandhi University Aug 2019 – May 2022
Full-Stack Development Program (MERN), Sharpener (certificate awarded on completion) Jul 2024 – Nov 2025
